

About

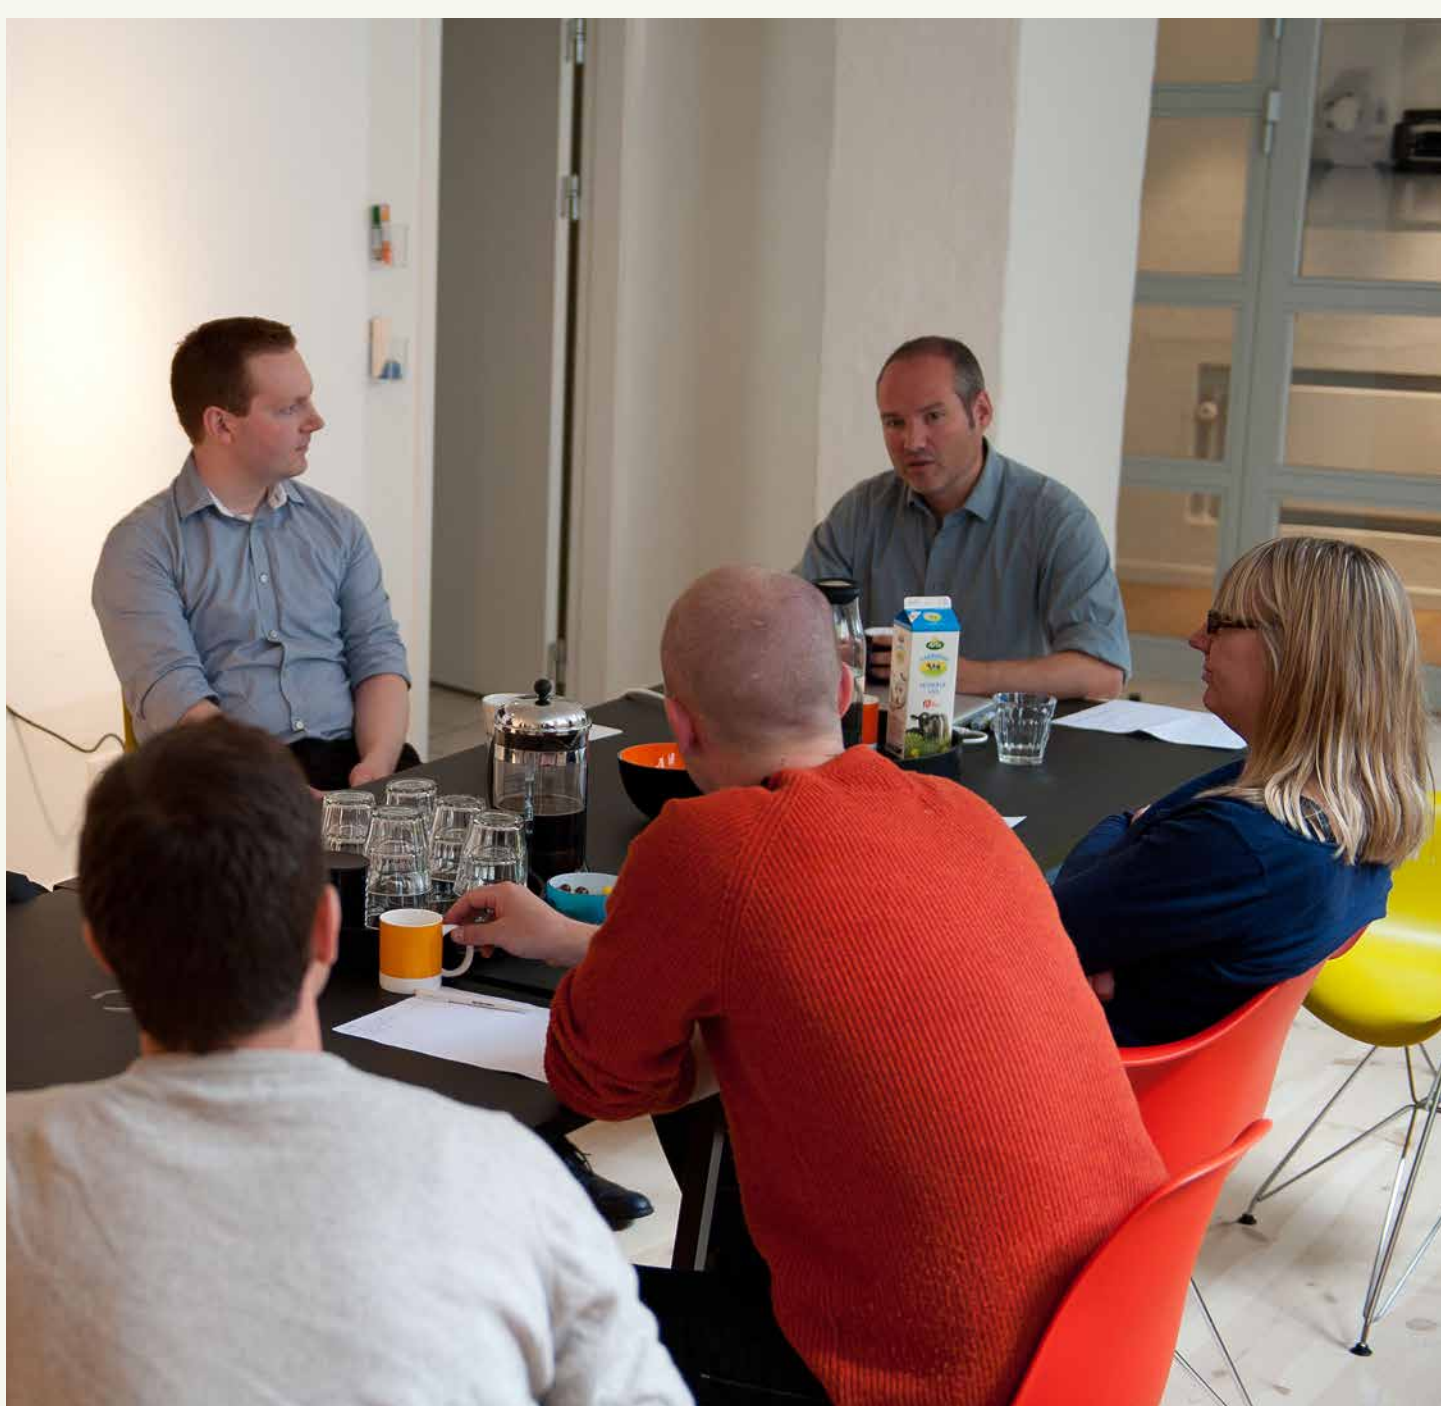

Finding new ways for innovators, developers, and government to work together.

The goals: grow B.C.'s tech economy, improve how government develops digital products, and make services for British Columbians better.

To those ends, the BC Developers' Exchange is:

- Creating faster ways for the public sector to acquire software from the tech community
- Matching the business needs of government organizations in B.C. with innovations from B.C.'s technology industry
- Sharing government digital resources – code, data and APIs – that entrepreneurs can use to seed their businesses.

Code With Us

Code with us.

We've been experimenting with [a new way](#) to hire developers to cut the code government needs. Instead of a bunch of paperwork, developers work directly in GitHub and get paid a fixed fee if their code meets the acceptance criteria.

Read about [what we've been learning](#) and how we're evolving the model, or go directly to [Open Opportunities](#) to find work.

[SEARCH OPPORTUNITIES](#)

"The process was really interesting...no paperwork! I got paid promptly and haven't been able to work with government before. It's nice to see government trying new things in the open."

Chad Oakenfold, Developer, Vancouver Island

"I got quick solutions that were of high quality by posting the opportunity through Code With Us."

Steve Howard, Government Product Owner

Designing an assignment mechanism...

September 4, 2016 by Loren Mullane

When developers told us they'd be wary of doing another Code With Us opportunity, because they were afraid of doing spec work, we listened. Find out what ideas the community had for how assignment of opportunities could work in a fair way for the community.

Kick Start Program

The [Kick Start Program](#) is training government digital product teams to adopt the modern methods that will enable them to develop and deliver more quickly, and continuously improve digital services. Meet our current cohort of teams.

MyGov

Personalized service for British Columbians. The MyGov team is working on a centralized module that will integrate with all service providers across government, providing a seamless experience for citizens.

Transportation IoT

Webcams can have more uses. After making the DriveBC webcam API open, entrepreneurs have been working on new uses for provincial infrastructure that will integrate with IoT in the decades to come.

Victims' Services

Streamlining the assessment and intake process and improving services to victims of crime in British Columbia.

Public Sector Partners

These public sector organizations have been the first to join the Exchange to start working with developers and entrepreneurs in new ways.

Browse [Open Opportunities](#) to see individual project teams, open resources, and what they're working on -- and get involved.

You can also view a list of [Open APIs](#).
